

How to create an HTML document in Mac (OSX)

1. Create a new **TextEdit** document.
2. Add this code:

```
<html>
```

```
<body>
```

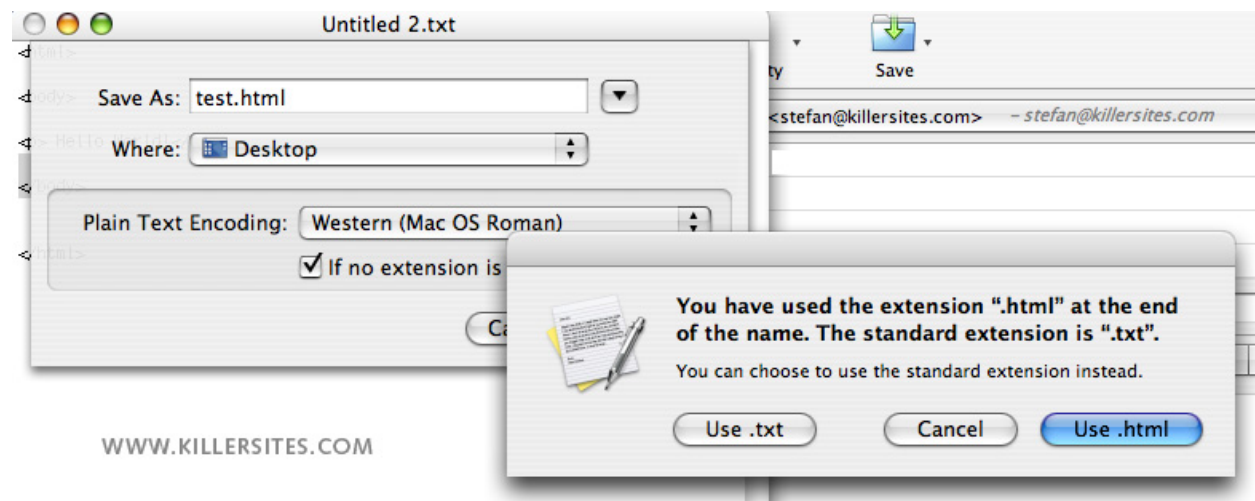

```
<p> Hello World!</p>
```

```
</body>
```

```
</html>
```

3. Select 'format' -> 'make plain text'
4. Select 'File' -> 'save as'
5. Save the file as: 'test.html'
6. You will be asked if you want to use '.html' ... do that.

Saving a TextEdit file so it 'becomes' a web page:

Be sure to save the file to your desktop so it is easy to find.
